IIHSE – International Institute of Health Safety Environment

Who We Are?

The International Institute of Health Safety Environment (IIHSE) is an independent and impartial organization dedicated to strengthening international collaboration, enhancing knowledge exchange, and supporting academic and professional activities across interdisciplinary fields such as health, safety, environment, quality, and sustainability. IIHSE operates alongside IHSE, a national-level institute established under the same organizational structure. Both IIHSE and IHSE work collaboratively, sharing the same administrative team while carrying out national and international initiatives through two interconnected institutes and associations.

Our Mission

- To develop joint projects with municipalities, research institutions, universities and the private sector
- To lead social impact projects that enhance awareness of HSE issues
- To provide innovative, internationally recognized training programs for municipal employees
- To strengthen the capacity of local governments in areas such as climate action, disaster management, environment, public health, and occupational health and safety

Our Vision

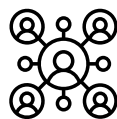

To become a global reference center working collaboratively with municipalities to provide solutions for a safe, healthy, and sustainable future — and to be one of the world's leading academic and professional networks in HSE.

Why It Matters for Municipalities?

IIHSE membership offers municipalities not only a strong network but also:

A bridge for
public–private
collaborations

Access to a
global
professional
and academic
ecosystem

Capacity-
building support
through training
and technical
development
